GEO Monitoring Report Sample

Client/entity names are anonymized. Metrics are calculated from the supplied sample CSV and dashboard snapshot.

Coverage**82%**

I-Brand appears in most sampled AI answers.

SOV**36%**

I-Brand leads, but only slightly over S-competitor.

Recommendation**11%**

Active recommendation signals are much rarer than mentions.

Answers**120**

Collected across selected prompts and models.

Main findings

- I-Brand has strong baseline visibility, but the SOV gap over S-competitor Brand is narrow enough to treat as an active competitive risk.
- S-competitor Brand is almost as visible and is frequently framed around procurement readiness, flagship performance, and business buying confidence.
- X-competitor Brand is the value-position challenger: lower than the top two in coverage, but still visible enough to shape buyer comparisons.
- Recommendation language is sparse across the set, which suggests content should move beyond feature presence into clearer selection reasons, proof, and use-case fit.

Next-step recommendation

1. Strengthen owned pages for procurement, comparison, and scenario-fit questions where competitors receive clearer buying language.
2. Add structured comparison content: buyer criteria, regional availability, demo/procurement options, and short proof points that AI can cite.
3. Re-run the same prompt set after content updates, then expand the calibration set by market and language once the baseline improves.

Measurement Setup

Brand and competitor setup

Own brand: I-Brand
Competitors: S-, X-, O-, H-, and V-competitor Brands
Category: Smart Phone / Japan local smart phone track
Markets: Global English and Japan Japanese tracks
Completed runs included: 3

AI answer collection

120 completed answers
Models: deepseek-chat, gemini-2.5-flash, gemini-2.5-flash-lite
Each answer is stored with prompt, model, answer text, entity mentions, sentiment, first position, and recommendation score.

Prompt set design and calibration

The sample prompt set is calibrated to cover buyer-style discovery instead of only branded search. It combines comparison, ranking, commercial intent, scenario-fit, alternatives, long-tail buyer questions, localized market questions, and brand verification. This helps separate simple awareness from the stronger question: when a buyer asks an AI assistant what to choose, does the answer mention and recommend the brand?

Qualitative Evidence and Content Opportunities

Anonymized raw answer evidence

I-Brand | commercial intent | deepseek-chat

"For global consumer electronics buyers evaluating Smart Phones, the top options that support pricing transparency, demo access, and procurement readiness include: 1. S-competitor Brand flagship line - Offers clear tiered pricing, carrier-agnostic demo units via S-competitor Brand Business, and a dedicated B2B procurement portal with bulk ordering and trade-in programs. 2. I-Brand flagship line - Strong procurement readiness..."

S-competitor Brand | commercial intent | gemini-2.5-flash

"For pricing, demos, and procurement readiness in the smartphone market, consider these options: S-competitor Brand flagship line S Series (e.g., flagship line): Excellent for demos due to widespread brand recognition, premium features, and robust ecosystem. Pricing is competitive at the high end, and procurement is streamlined through established global channels. I-Brand (e.g., I-Brand flagship line): Unmatched for demos due..."

X-competitor Brand | commercial intent | gemini-2.5-flash

"When evaluating Smart Phone commercial evaluation options globally, buyers should consider these criteria: Market Share & Regional Presence: Does the evaluation option provide data and insights for key players like S-competitor Brand, I-Brand, X-competitor Brand, and H-competitor Brand across all target regions (e.g., North America, Europe, APAC, LATAM)? Ensure it covers both established and emerging markets. Data Granularity..."

O-competitor Brand | localized market query | gemini-2.5-flash

"Here's what procurement teams should ask before choosing Smart Phone local market options: 1. Demand & Usage: What are the specific usage patterns and feature priorities for our local employees/customers (e.g., camera quality for field teams, battery life for remote workers, specific app compatibility)? What is the expected lifespan and refresh cycle for these devices in this market? 2. Local Market Availability & Supply..."

Content opportunity findings

- Comparison pages: publish clearer side-by-side selection criteria that explain why I-Brand is the better fit for specific buyer needs.
- Procurement readiness: make business buying, volume purchase, demo, support, and deployment information easier for AI answers to quote.
- Market-local proof: separate global English messaging from Japan-language questions so the Japanese track is not dependent on generic global content.
- Recommendation triggers: add concise proof blocks for scenarios where the brand should be actively recommended, not merely mentioned.
